

Prevention of Unintended Pregnancies in California

CALIFORNIA STATE SENATE AND ASSEMBLY DISTRICTS

October 2010

In 2007, Family PACT's contraceptive services averted 286,700 unintended pregnancies among its female clients, resulting in the aversion of nearly \$2 billion in public sector costs.

The Family PACT (Planning, Access, Care and Treatment) Program

was established by the California legislature in 1996 and implemented in 1997 to provide family planning and reproductive health services at no cost to California's low-income residents of reproductive age. Since December 1999, the federal government¹ has provided additional funding for the program. The program offers family planning services including contraception, sterilization, and pregnancy testing. Additionally, reproductive health services such as testing and treatment for specific sexually transmitted infections and limited cancer screening services are available. The program does not provide pregnancy care or abortion-related services. By serving California residents at or below 200 percent of the federal poverty level and with no other source of coverage for family planning services, Family PACT fills a critical gap in health care. Family PACT's provider network includes both public and private clinician providers. This unique provider mix increases access to services and improves client choice.

Successes

Between Calendar Years (CY) 2002 and 2007:

- The number of clients served by Family PACT increased from 1.52 million to 1.66 million.
- The number of clinician providers delivering care increased slightly from 2,115 to 2,141.
- The number of unintended pregnancies averted to female clients increased from 204,950 to 286,700.
- The total public sector costs averted through the prevention of unintended pregnancies among female Family PACT clients increased from \$1.11 billion to \$1.88 billion. It is estimated that in 2002, the California State government averted 62 percent of the total expenditures associated with unintended pregnancies while the federal share was 37 percent and the local share was one percent. By 2007, the state share increased slightly to 66 percent, the federal share decreased to 33 percent and the local share remained small at less than one percent.
- By reducing public health and welfare expenditures resulting from unintended pregnancies, every dollar spent on Family PACT in 2007 saved the public sector \$4.30 from conception to age two and \$9.25 from conception to age five, nearly doubling from the cost-benefit ratios estimated for 2002 (\$2.76 and \$5.33, respectively).

Characteristics of California's Family PACT Program, 2002 and 2007

Assessing Costs Averted by California Senate and Assembly Districts

The following figures include data on the Family PACT program for 2007. Information about Family PACT clients, providers, expenditures, and pregnancies averted is based on the district in which each client gained entry into the Family PACT program. Pregnancies averted by the program are estimated based on the number of women receiving contraception and the number of months of contraception protection dispensed. Public costs averted represent the amount of money that would have been spent on publicly funded services for mother and baby from conception to age two of the child.

California's Approach to Teen Pregnancy Prevention

California has adopted a comprehensive approach to teenage pregnancy prevention, including family life education that supports young people delaying having sex, accurate information about contraceptive methods, as well as access to clinical care. California's teen birth rate has declined 50 percent since 1991, compared to a 33 percent national decline. This is the highest rate of decline when compared to any other state in the nation.

Trend in Teen Birth Rates: California vs. United States
